Update date: February 1, 2024

Group No. 8: Gastroenterology

CASTOR OIL

Clue	Description	Indications	Route of administration and dosage		
010.000.1273.00	SOLUTION Each container contains: Castor oil. Container with 70 mL.	Constipation. Colon emptying, pre-surgical as preparation or for performing abdominal imaging studies.	Oral. Adults: 15 to 70 mL in a single dose. Children over two years old: 5 to 35 mL.		
Generalities Stimulates intestinal motor activity through direct action of smooth muscle and stimulation of the intramural nerve plexus. Risk in Pregnancy					
Adverse effects Nausea, diarrhea, intestinal colic, belching, allergic reactions. Contraindications and Precautions					
Contraindications: H	vpersensitivity to the drug, acute abdomen synd		Lichtonic nonspecific ulcerative colitis, intestinal		

Interactions

It decreases the absorption of medications administered orally. With other types of laxatives, their adverse effects increase.

ALUMINUM

obstruction, appendicitis.

Clue	Description	Indications	Route of administration and dosage
	TABLET	Gastric of	Oral.
		hypersecretion disorders.	
	Each tablet contains:		Adults:
	Aluminum hydroxide 200 mg.	Hyperphosphatemia in chronic renal failure.	200 to 600 mg one hour after meals and at bedtime.
010.000.1221.00	Package with 50 tablets.		
	ORAL SUSPENSION		Hyperphosphatemia: 400 mg to 2 g every 6, 8 or 12 hours.
	Each 100 mL contains:		
	Aluminum hydroxide 7 g.		Children:
	·		50 to 150 mg/kg body weight/day, administer divided
010.000.1222.00	Container with 240 mL and dispenser (350 mg/5		dose every 6 hours.
	mL).		

Generalities

Neutralizes acid and protects the gastric mucosa; increases the tone of the esophageal sphincter. Decreases intestinal absorption of phosphates.

Risk in Pregnancy	, b			
	Adverse effects			
Constipation, nausea, vomiting, fecal impaction, flatulence, hypophosphatemia.				
	Contraindications and Precautions			
Contraindications: Hypersensitivity to the drug, intest	inal obstruction.			

Precautions: Kidney failure. Administer the antacid 2 hours before or 2 hours after ingestion of other medications.

Interactions

Decreases the absorption of digoxin, atenolol, benzodiazepines, captopril, corticosteroids, fluoroquinolones, H2 antihistamines, hydantoins, iron salts, ketoconazole, penicillamine, phenothiazines, salicylates, tetracyclines and ticlopidine. Increases the absorption of metoprolol, levodopa, quinidine, sulfonylureas and valproic acid.

ALUMINUM AND MAGNESIUM

Clue	Description	Indications		Route of administration and dosage
	CHEWABLE TABLET	Gastric	of	Oral.
		hypersecretion disorder	S.	
	Each chewable tablet contains: Aluminum			Adults:
	hydroxide 200 mg.	Dyspepsia.		
	Magnesium hydroxide 200 mg.			One to two tablets or tablespoons, every 8 hours.
	or magnesium trisilicate: 447.3 mg			
010.000.1223.00	Package with 50 chewable tablets.			Children over 6 years:
	ORAL SUSPENSION	7		
				One tablet or tablespoon, every 8 or 12 hours.
	Each 100 mL contains:			
	Aluminum hydroxide 3.7 g.			
	Magnesium hydroxide 4.0 g.			
	or magnesium trisilicate: 8.9 g.			
010.000.1224.00	Contribution with 040 and and discourse			
010.000.1224.00	Container with 240 mL and dispenser.	L		

Generalities

Neutralizes acid and protects the pastric mucosa: increases the tone of the esophageal sphincter. Decreases intestinal absorption of phosphates

Neutralizes acid and protects the gastric mucosa; increases the tone of the esophageal sphincter. Decreases intestinal absorption of phosphates.
Risk in Pregnancy b
Adverse effects
Constipation, nausea, vomiting, fecal impaction, flatulence, hypophosphatemia.
Contraindications and Precautions
Contraindications: Hypersensitivity to the drug, kidney failure, urinary tract stones, intestinal obstruction.
Precautions: If you are taking other medications simultaneously, if discomfort persists or there is abdominal pain.
Interactions
Decreases the absorption of digoxin, atenolol, benzodiazepines, captopril, corticosteroids, fluoroquinolones, H2 antihistamines,

hydantoins, iron salts, ketoconazole, penicillamine, phenothiazines, salicylates, tetracyclines and ticlopidine.

BISMUTH

Clue	Description	Indications Mild	Route of administration and dosage
	ORAL SUSPENSION	non-specific diarrhea.	Oral.
	Each 100 mL contains: Bismuth		Adults:
	subsalicylate 1,750 g.		30 mL every 2 hours, up to 8 doses in 24 hours.
010.000.1263.00	Container with 240 mL.		
			Children:
			From 3 to 6 years: 5 mL.
			From 6 to 9 years 10 mL.
			From 9 to 12 years 15 mL.
			every 4 or 6 hours.

Generalities

It has light hygroscopic activity; can adsorb toxins and provide protective coating to the mucosa intestinal.

Risk in Pregnancy	С
	Adverse effects

Encephalopathy, constipation, tinnitus, temporary blackening of the tongue and stool.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug and salicylates; bleeding peptic ulcer, kidney failure, hemophilia. Precautions: Third trimester of pregnancy, glucose 6-phosphate dehydrogenase deficiency, coagulopathy, peptic ulcer, diabetes mellitus, liver failure and kidney failure. Do not use to treat vomiting in children or adolescents who have or are recovering from chickenpox or the flu. In children under 6 years of age.

1	Interactions	

Reduces the effect of oral anticoagulants and hypoglycemics. With probenecid risk of decreased uricosuric effect.

BUTYLHIOSCINE OR HIOSCINE

Clue	Description	Indications	Route of administration and dosage
	DRAGEE OR TABLET	Spasms and disorders of the motility of the gastrointestinal	Oral.
	Each dragee or tablet contains: Butylhyoscine bromide or hyoscine	tract.	Adults and kids older than 12 years old:
	butylbromide 10 mg.	Spasms and dyskinesias of the	10 to 20 mg every 6 to 8 hours.
		bile and urinary tracts.	
010.000.1206.00	Package with 10 dragees or tablets.		
	INJECTABLE SOLUTION	Dysmenorrhea.	Intramuscular, intravenous.
	Each vial contains: Butylhyoscine		Adults:
	bromide or hyoscine butylbromide		20 mg every 6 to 8 hours.
	20 mg.		
			Children:
010.000.1207.00	Container with 3 vials of 1 mL.		5 to 10 mg every 8 to 12 hours.

Generalities

It acts as a competitive parasympathetic antagonist of visceral smooth muscle receptors, producing relaxation in the intestinal, biliary and urinary tracts.

Risk in Pregnancy c

Adverse effects

Increased heart rate, skin rashes and allergic reactions.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug, glaucoma, prostatic hypertrophy, tachycardia, megacolon and asthma. Precautions: Heart failure and tachyarrhythmias.

Interactions

 $\label{thm:continuous} \mbox{Tricyclic antidepressants, amantadine and quinidine, increase their anticholinergic action.}$

BUTYLHIOSCINE-METAMIZOLE

Clue	Description	Indications	Route of administration and dosage
	DRAGEE Each dragee contains: Butylhyoscine bromide 10 mg Metamizole sodium monohydrate equivalent to 250 mg. of metamizole sodium.	Biliary colic. Intestinal colic. Renal colic. Dysmenorrhea.	Oral. Adults: 1 to 2 tablets every 6 to 8 hours.
010.000.0113.00	Container with 36 dragees.		
	INJECTABLE SOLUTION Each vial contains: Hyoscine N-butylbromide 20 mg. Metamizole 2.5 g.		Intravenous (5 to 10 minutes) or deep intramuscular. Adults: One vial every 8 hours, for pain relief.
010.000.2146.00	Container with 5 vials of 5 mL.		

Butylhyoscine bromide acts as a competitive parasympathetic antagonist of visceral smooth muscle receptors, producing relaxation in the intestinal, biliary and urinary tracts. Metamizole has analgesic action at three levels; peripheral, medullary and thalamic. It binds to peripheral receptors, making them refractory to the reception and transmission of pain.

Generalities

Risk in Pregnancy	С
	Adverse effects

Contraindications and Precautions

Contraindications: Hypersensitivity to drugs and pyrazolones, duodenal ulcer, porphyria, granulocytopenia, glucose-6-phosphate dehydrogenase deficiency, liver and kidney failure.

Precautions: Glaucoma, prostatic hypertrophy, heart failure, tachyarrhythmias.

Interactions

Metamizole is enhanced with pyrazolone derivatives, increasing the action of coumarin anticoagulants; Phenothiazines enhance their antipyretic action. The anticholinergic action of bultilhyoscine is increased by the tricyclic antidepressants, amantadine and quinidine.

CINITAPRIDE

Clue	Description	Indications	Route of administration and dosage
	COMPRESSED	Gastroesophageal reflux.	Oral.
	Each tablet contains Cinitapride bitartrate equivalent to 1 mg. of	Functional disorders of gastrointestinal	Adults: (over 20 years old).
	cinitapride.	motility.	1 mg three times a day, 15 minutes before each meal.
010.000.2247.00	Package with 25 tablets.		
	GRANULATED		
	Each envelope contains: Cinitapride bitartrate equivalent to 1 mg. of cinitapride.		
010.000.2248.00	Container with 30 sachets.		

Generalities

It is an orthopramide with prokinetic activity in the gastrointestinal tract, with marked procholinergic action. It improves the clinical symptoms of dyspepsia and slowing of gastric emptying and intestinal transit (slow digestion, postprandial gastric digestion, the feeling of early fullness, abdominal pain, nausea, vomiting and premature satiety). Reduces reflux episodes and time with esophageal pH less than four.

Risk in Pregnancy C

Adverse effects

At doses higher than those recommended, extrapyramidal reactions that disappear when the medication is discontinued. Mild sedation and drowsiness.

Contraindications and Precautions

Contraindications: History of bleeding, obstruction or perforation of the gastrointestinal tract; tardive dyskinesia to neuroleptics. Pregnancy, breastfeeding and those under 20 years of age.

Interactions

Gastric emptying stimulated by cinitapride may alter the absorption of some medications. It enhances the effects of phenothiazines and other antidopaminergic drugs on the central nervous system. It may reduce the effect of digoxin due to a decrease in its absorption. Its effect decreases in coadministration with atropine anticholinergics and narcotic analgesics. With alcohol, tranquilizers, hypnotics and narcotics, it enhances its sedative effect.

CISAPRIDE

Clue	Description	Gastropare	Route of administration and dosage
	ORAL SUSPENSION	Indications .	Oral.
	Each 100 mL contains: Cisapride	Gastroesophageal reflux.	Children with body weight less than 25 kg:
	100 mg.		0.2 mg/kg body weight every 6 or 8 hours.
010.000.1208.00	Container with 60 mL and dispenser.		Children with body weight greater than 25 kg and less
			than 50 kg: 5 mg every 6 hours.
			Adults:
			5 to 10 mg before meals and at bedtime.
	TABLET		

010.000.2147.00	Each tablet contains: Cisapride 10 mg. Package with 30 tablets.		
		Generalities	
5-HT receptor ag	onist. Prevents gastric a	tony by increasing acetylcholine in the my	enteric plexus.
	Risk in Pre	egnancy c	
		Adverse effects	7
Colic, borborygmi, dyspepsia, diarrhea. Headache, lightheadedness, QT prolongation on ECG, arrhythmias, cardiac arrest, anaphylaxis, aplastic anemia, extrapyramidal symptoms, psychiatric disorders, fever, tachycardia, hypoglycemia, nausea, rhinitis, constipation, insomnia gynecomastia, elevated transaminases.			
		Contraindications and Precautions	٦
	, ,	drug, prolonged QT, ventricular arrhythm	」 iia, bradycardia, alteration of the sinus ilure, hypokalemia and hypomagnesemia.
Precautions: Live	er failure, neonates.		
		Interactions	٦

HIV protease inhibitors, azole antifungals, and macrolide antibiotics increase their plasma concentration.

DIOSMECTITE

Clue	Description	Indications	Route of administration and dosage

		Acute diarrhea in adults, children and	
	Each sachet contains:	older infants as a complement or when	Older infant and preschoolers (from
	Diosmectite 3,000 g	therapy such as oral hydration is not	1 to 4 years): 4 sachets per day for 3 days.
		sufficient.	Maintenance:
010.000.7001.00	Container with 10 sachets of 3 g, and attached instructions		2 sachets per day until the 7th day.
			Schoolchildren (5 to 9 years old): 4 sachets
			per day for 3 days.
			Maintenance: 2 sachets per day until the 7th day.
			Adolescents (10 to 19 years old): 2 sachets 3 times a day for 4 days. Maintenance: 3 sachet
			per day until the 7th day.
			The contents of the sachet should be mixed in
			50mL of water to make a suspension directly
			before use.
	'	eneralities	Ala

Double aluminum and magnesium silicate whose spatial structure provides a high degree of coverage and fixation capacity, which explain its properties in relation to the intestinal mucosa.

Risk in Pregnancy	x
	Adverse effects

Common: Constipation may occur, which usually improves with dose reduction; in some cases, rarely, discontinuation of treatment may be necessary.

Contraindications and Precautions

Contraindications: Hypersensitivity to diosmectite or any of its components. Avoid its use in patients with severe dysenteric diarrhea (when accompanied by mucus, pus and/or blood or fever greater than 39°C). Patients with intestinal obstruction or intestinal atony (especially older adults).

Precautions: Even though this medication is not absorbed, it should be used with caution in patients with kidney failure (especially older adults). Its use is not recommended in patients who are fructose intolerant due to the presence of glucose and sucrose.

The adsorbent properties of this product may interfere with the absorption periods and/or rates of other substances. It is recommended that it not be used concomitantly with another medication.

SODIUM PHOSPHATE AND CITRATE

Clue	Description	Indications	Route of administration and dosage
	SOLUTION	Constipation.	Rectal.
	Each 100 mL contains:	Rectal stimulation for intestinal	Adults:
	Monosodium phosphate 12 g.	evacuation.	Apply the content only once; can be repeated after 30
	Sodium citrate 10 g.		minutes.
010.000.1277.00	Container with 133 mL and rectal cannula.		Children:
			Apply 60 mL in a single dose.

Generalities	

It has an osmotic effect by extracting water from the tissues to the intestinal lumen.

Risk in Pregnancy b

Adverse effects

Abdominal cramps. Electrolyte and fluid imbalance if used daily.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug. Chronic ulcerative colitis, anorectal conditions, acute abdominal syndrome, appendicitis and intestinal perforation.

Interactions

None of clinical importance.

GI YCFROI

Clue	Description	Indications	Route of administration and dosage
	SUPPOSITORY	Constipation.	Rectal.
	Each suppository contains: Glycerol 2,632 g.		Adults:
010 000 1278 00	010,000,1278,00 Container with 6 suppositories		2,632 g every 8 hours.
010.000.1270.00	Container with 6 suppositories.		Children:
			1,380 g every 8 hours.

Generalities	
--------------	--

Hyperosmolar laxative that draws water from the tissues into the stool and stimulates evacuation.

Risk in Pregnancy To Adverse effects

Intestinal cramps, rectal discomfort, hyperemia of the rectal mucosa.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug, abdominal colic of undetermined etiology, acute abdomen and appendicitis.

Interactions

None of clinical importance.

LIDOCAINE - HYDROCORTISONE

Clue	Description	Indications	Route of administration and dosage
	OINTMENT	Anorectal inflammatory processes.	Rectal.
	Each 100 grams contains: Lidocaine	Local anasthatic restal	Adults:
	5 g. Hydrocortisone Acetate 0.25 g. Aluminum Subacetate 3.50 g. Zinc	examinations.	One to four applications a day.
	Oxide 18 g.		Children over 2 years:
010.000.1363.00	Container with 20 g and applicator.		One to three applications in 24 hours.
			Apply the minimum amount necessary.
	SUPPOSITORY		Rectal.
	Each suppository contains:		Adults:
	Lidocaine 60 mg. Hydrocortisone Acetate 5 mg. Zinc Oxide 400 mg.		One to two suppositories in 24 hours.
	Aluminum Subacetate 50 mg.		
010.000.1364.00	Container with 6 suppositories.		

Generalities

Anesthetic and anti-inflammatory, due to the characteristics of its components.

Risk in P	regnancy C
	Adverse effects
Allergic reactions; feeling of rectal discomf	ort.
Ï	Contraindications and Precautions
Contraindications: Hypersensitivity to the contraindications	components of the drug, anorectal tuberculosis. Interactions
None of clinical importance.	

LOPERAMIDE

Clue	Description	Indications	Route of administration and dosage
	TABLET, TABLET OR	Diarrheal syndrome.	Oral.
	DRAGEE		Adults:
	Each tablet, tablet or dragee contains:		
	Loperamide hydrochloride 2 mg.		Initial: 4 mg, maintenance 2 mg, after each evacuation (maximum 16 mg per day).
010.000.4184.00	Package with 12 tablets, tablets or dragees.		Children 8 to 12 years:
			2 mg every 8 hours, maintenance 1 mg after each
			evacuation (maximum 8 mg per day).

Generalities

It acts on circular and longitudinal muscles through the direct effect and interaction with the release of acetylcholine, inactivates

Risk in Pregn	ancy	
1	Adverse effects	
Constipation, nausea, vomiting, drowsines	s, fatigue, dizziness, abdominal distention, ra	ash, cramps.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug, intestinal atony, constipation and intestinal obstruction. Precautions: In children under 6 years of age, liver failure, prostatic hyperplasia, pseudomembranous colitis.

calmodulin and increases the absorption of water and electrolytes in the intestinal lumen.

Interactions	\neg
intordotions	

None of clinical importance.

MAGNESIUM

Clue	Description	Indications	Route of administration and dosage
010.000.1275.00	ORAL SUSPENSION Each 100 mL contains: Magnesium hydroxide 8.5 g. Container with 120 mL. (425 mg/5 mL).	Constipation. Dyspepsia.	Oral. Adults: Laxative: 30 to 60 mL dissolved in a glass of water. Dyspepsia: 10 to 15 mL. Children: Laxative: 15 to 30 mL dissolved in water. Dyspepsia: 5 to 10 mL, every 12 or 24 hours.

Generalities

It produces an osmotic effect in the small intestine by drawing water into the intestinal lumen. Inhibits the action of gastric juice.

Risk in Pregnancy	
70	

Nausea, abdominal cramps. fluid and electrolyte imbalance due to excessive and repeated administrations. Laxative dependence due to continuous administration.

Contraindications and Precautions

Adverse effects

Contraindications: Hypersensitivity to the drug, acute abdomen, fecal impaction, diarrhea, UC, intestinal obstruction.

Interactions None of clinical importance.

METOCLOPRAMIDE

Clue	Description	Indications	Route of administration and dosage
010.000.1241.00	INJECTABLE SOLUTION Each vial contains: Metoclopramide hydrochloride 10 mg. Container with 6 vials of 2 mL.	Nausea. Threw up. Gastroesophageal reflux. Gastroparesis.	Intramuscular or intravenous. Adults: 10 mg every 8 hours. Children: Children under 6 years old. 0.1/kg body weight/day, divided dose every 8 hours.
	TABLET Each tablet contains: Metoclopramide hydrochloride 10 mg.		From 7 to 12 years 2 to 8 mg/kg body weight/day, divided dose every 8 hours. Oral Adults: 10 to 15 mg every 6 to 8 hours.
010.000.1242.00	Package with 20 tablets. SOLUTION		Children: Children under 6 years old. 0.1/kg body weight/day, divided dose every 8 hours.
010.000.1243.00	Each mL contains: Metoclopramide hydrochloride 4 mg. Dropper bottle container with 20 mL.		From 7 to 12 years 2 to 8 mg/kg body weight/ day, divided dose every 8 hours.

Stimulates the motility of the upper gastrointestinal tract without increasing pancreatic, biliary or gastric secretions. It increases the tone and amplitude of gastric contractions, relaxes the duodenal bulb and the pyloric sphincter, peristalsis, gastric emptying and intestinal transit. The antiemetic properties are due to antagonism of dopaminergics, central to the chemoreceptor "trigger" zone. peripherals and

URSODEOXYCHOLIC ACID

Clue	Description	Indications	Route of administration and dosage
	CAPSULE	Dissolution of stones	Oral.
		cholesterol, in patients with	
	Each capsule contains:	radiolucent, uncomplicated	Adults:
	Ursodeoxycholic acid 250 mg.	lithiasis, with a functional	
		gallbladder.	8 to 15 mg/kg body weight/day.
010.000.4185.00	Container with 50 capsules.		
010.000.4185.01	Container with 60 capsules.		
	TABLET	1	
	Each tablet contains:		
	Ursodeoxycholic acid 500 mg.		
010.000.7119.00	Package with 30 tablets.		

Generalities

By inhibiting hydroxymethylglutamyl-Co A reductase, it reduces bile cholesterol levels by suppressing its hepatic synthesis and inhibiting its intestinal absorption. The reduction of cholesterol levels allows the gradual solubilization and dissolution of the stones. Bile stimulates hepatocellular and cholangiocellular secretion by increasing concentrations of hydrophilic bile acids, reduces bile cholesterol saturation by inhibiting intestinal cholesterol process the absorption, and decreases bile cholesterol secretion, which causes stones to dissolve.

Risk in Pregnancy x		
	Adverse effects	
Diarrhea.		
	Contraindications and Precautions	
Contraindications: Hypersensitivity to the drug, acut	e diseases of the bile ducts and intestinal inflammatory	processes.
	Interactions	
Its absorption decreases with chalastyramine, colos	tinol and antacide containing aluminum. Clofibrate, est	rogens, and progestins may decrease the chance of

Its absorption decreases with cholestyramine, colestipol and antacids containing aluminum. Clotibrate, estrogens, and progestins may decrease the chance of dissolving stones because they tend to increase cholesterol saturation in the bile.

BOCEPREVISE

Clue	Description	Indications	Route of administration and dosage

010.000.5675.00			with peginterferon alfa and ribavirin.
010.000.3073.00	Package with four boxes with 84 capsules each.		The recommended dose of Boceprevir is
			800 mg, three times a day (TID) with food.
			800 mg, tillee tilles a day (TD) with 100d.
			Patients without cirrhosis and who have not been previously
			treated:
			Start therapy with peginterferon alfa and ribavirin for 4 weeks
			(treatment weeks 1-4).
			Add Boceprevir 800 mg three times daily to the peginterferon
			alfa and ribavirin regimen from treatment week (ST) 5.
			Based on the patient's HCV-RNA levels at ST 8 and ST 24,
			use the following response-guided therapy (RRT) guidelines
			to determine treatment duration:
			a) Not detectable in STs 8 and 24:
			finish the three-drug regimen on ST 28.
			b) Detectable at ST 8 and not detectable at ST 24: Continue
			all three medications until treatment week 28 and then
			administer peginterferon alfa and ribavirin until treatment
			week 48.
			c) Any result at ST 8 and detectable at week 24: interrupt the
			three-week regimen.
1			

Generalities

Boceprevir is an HCV NS3 protease inhibitor. Boceprevir binds covalently, yet reversibly, to the active site serine of the NS3 protease (Ser139) via a ketoamide (alpha) functional group to inhibit viral replication in HCV-infected host cells.

Risk in Pregnancy c

Adverse effects

The most frequently reported adverse reactions were similar between all study groups. The adverse reactions most frequently considered by investigators to be causally related to the combination of boceprevir with peginterferon alfa-2b and ribavirin in adult subjects in clinical studies were: fatigue, anemia, nausea, headache, and dysgeusia.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug. Patients with autoimmune hepatitis, patients with hepatic impairment [Child-Pugh Score >6 (class B and C)], concomitant administration with medications that are highly dependent on CYP3A4/5 for clearance and for which plasma concentrations elevated are associated with serious and/or life-threatening events, such as midazolam, amiodarone, astemizole, bepridil, pimozide, propafenone, quinidia, and ergot derivatives (dihydroergotamine, ergonovine, methylergonovine) administered orally; women who are pregnant.

Precautions: Anemia, neutropenia, drugs containing drospirenone, strong CYP3A4 inducers, monotherapy with HCV protease, use in patients with rare inherited disorders, effects on the ability to drive and use machines.

Interactions

Boceprevir is a strong CYP3A4/5 inhibitor. Drugs primarily metabolized by this cytochrome may increase its exposure when administered with boceprevir, which could increase or prolong its therapeutic and adverse effects (peginterferon alfa-2b, clarithromycin) in combination with diflunisal, ketoconazole, tenofovir, efavirenz, ritonavir, diflunisal, ibuprofen, drospirenone/ethinyl estradiol, midazolam (oral and IV), alprazolam and triazolam (IV). Co-administration of boceprevir with medications that induce or inhibit this cytochrome could increase or decrease boceprevir exposure.

DEXLANSOPRAZOLE

Clue	Description	Indications	Route of administration and dosage
	RELEASE CAPSULE	Severe erosive esophagitis	Oral.
	DELAYED		Adults:
	Each delayed-release capsule contains:	gastroesophageal reflux.	Addits.
	Lacif delayed-release capsule contains.		Healing of erosive esophagitis: 60 mg every 24
	Dexlansoprazole 60 mg.		hours for 8 weeks.
040 000 5005 04			
010.000.5635.01	Package with 28 delayed release capsules.		

10		
ı	Generalities	
	Generalities	

Dexlansoprazole is the R-enantiomer of lansoprazole, therefore it is a proton pump inhibitor that suppresses gastric acid secretion by specifically inhibiting (H+K+)-ATPase in gastric pariental cells.

Through the specific action of the proton pump, dexlansoprazole blocks the final step of acid production.

Risk in Pregr	nancy		
	Adverse effects		
Diarrhea, abdominal pain, nausea, vomiting, upper respiratory tract infection.			
	Contraindications and Precautions		
Contraindications: Hypersensitivity to the drug. Precautions: Bone fracture, hypomagnesemia.			
	Interactions		

Due to the effect of the decrease in gastric acidity, the absorption of medications that depend on acid for their absorption such as ketoconazole, ampicillin, iron salts, digoxin, their absorption may be decreased during treatment with dexlansoprazole. Decreases systemic concentrations of HIV protease inhibitors such as atazanavir, resulting in loss of therapeutic effect and viral resistance. By inhibiting CYP2C19 it may reduce the levels of Clopidogrel metabolites. Concomitant administration with tacrolimus may increase total tacrolimus levels, especially in transplant patients, poor or moderate CYP2C19 metabolizers.

Patients concomitantly taking warfarin may require monitoring for increases in international normalized ratio and prothrombin time.

ESOMEPRAZOLE

Clue	Description	Indications	Route of administration and dosage
	TABLET	Peptic ulcer.	Oral
	Each tablet contains: Esomeprazole magnesium trihydrate	Gastric ulcer.	Adults:
	equivalent to 40 mg. esomeprazole	Duodenal ulcer.	One tablet or dragee or capsule every 12 or 24 hours, for two to four weeks.
010.000.5188.00	Package with 14 tablets.	Reflux esophagitis.	
		Zollinger-Ellison syndrome.	

Indicated in acid peptic diseases where control of acid secretion is required. Through a specific effect of inhibition of the proton pump in parietal cells.

pump in panetal cells.	
Risk in Pregnancy c	
Adverse effects	
Headache, vertigo, abdominal pain, diarrhea, flatulence, nausea, vomiting, dry mouth, d Contraindications and Precautions	dermatitis, pruritus, urticaria.
Drug hypersensitivity.	
Interactions	

Due to the effect of the decrease in gastric acidity, the absorption of medications that depend on acid for their

absorption such as ketoconazole and itraconazole, their absorption may be decreased during treatment with esomeprazole. Being metabolized mainly by the CYP2C19 enzyme, other medications that share CYP2C19 as the main metabolizing enzyme, such as diazepam, citalopram, imipramine, clomipramine, phenytoin and warfarin, among others, may require dose adjustment due to an increase in plasma concentrations.

LACTULOSE

Clue	Description	Indications	Route of administration and dosage
	SYRUP	Hepatic or portosystemic	Oral
		encephalopathy, acute and chronic;	
	Each 100 mL contains: Lactulose	clinical and subclinical.	Hepatic or portosystemic encephalopathy: Adults:
	66.70 g	Intestinal constipation or	90 to 180 mL daily in 3 or 4 doses.
010.000.6099.00	Container with 120 mL and measuring measure	constipation.	Doses of 30 to 45 mL can also be administered every 1
	(0.667 g/mL).		to 2 hours, until the laxative effect is produced.
010.000.6099.01	Container with 240 mL and measuring measure (0.667 g/mL).		If it cannot be administered orally, it can be administere
			enema of 300 mL of lactulose with 700 mL of water or physiological solution, retain it for 30 to 60 minutes and repeat it every 4 to 6 hours (or immediately if it has not been retained long enough), until the patient can take the medication orally.
			Children and adolescents: 40 to 90 mL daily, divided into 3 or 4 doses until the laxative effect is produced. Infants: 2.5 to 10 mL daily, administered in a single dose or divided into 2 doses, in the morning and at night.
			After obtaining the laxative effect, the dose should be reduced and adjusted every 1 to 2 days until you obtain 2 to 3 soft stools daily.
			To prevent hepatic encephalopathy, the recommended daily doses should be administered orally, in constipation
			Intestinal constipation or constipation: Adults:
			15 to 30 mL daily, administered in 1 single dose or divided into 2 doses in the morning an at night. If required, the dose can be increased to 60 mL. Children under 1 year: 5 mL.
			Children from 1 to 5 years: 10 mL.
			Children from 6 to 12 years: 20 mL Administered in a single dose or divided into 2 doses, i
			the morning and at night. Weight dose: 0.2 to 0.4 g/kg/day equivalent to 0.3-0.6 mL/kg/day, administered in 1 single dose or divided int 2 doses, in the morning and at night.
	DUST		Oral.
	Each envelope contains: Lactulose 5 g		Hepatic or portosystemic encephalopathy: Adults:
010.000.6100.00	Container with 15 sachets with powder		60 to 120 g daily, divided into 3 or 4 doses. Doses of 2 to 30 g can also be administered every 1 to 2 hours, ut the laxative effect is produced.
			If it cannot be administered orally, it can be administer rectally, in an enema of 300 mL of lactulose with 700 n of water or physiological solution, retain it for 30 to 60
			minutes and repeat it every 4 to 6 hours (or immediate if if it has not been retained long enough), until the pat can take the medication orally.
			Children and adolescents: 4 to 8 sachets daily, divided into 3 or

4 doses until the laxative effect is produced. Infants: Half a sachet to a sachet daily, administered in a single dose or divided into 2 doses, in the morning and at night. After obtaining the laxative effect, the dose should be reduced and adjusted every 1 to 2 days until you obtain 2 to 3 soft stools daily. To prevent hepatic encephalopathy, the recommended daily doses should be administered orally, in constipation. Intestinal constipation or constipation: Adults: 2 to 4 sachets (10 to 20 g) daily, administered in a single dose or divided into 2 doses in the morning and at night. Children under 1 year: 1/2 sachet daily. Children from 1 to 5 years: 1 sachet daily. Children from 6 to 12 years: 2 sachets daily. Administered in a single dose or divided into 2 doses, in the morning and at night. Weight dose: 0.2 to 0.4 g/kg/day administered in a single dose or divided into 2 doses, in the morning and evening.

Generalities

Lactulose is a semisynthetic disaccharide, it modifies the metabolism of nitrogenous substances that generate ammonia in the colon, an action mediated by bacterial metabolism. This effect is additional to its laxative effect; other laxatives do not have a similar action on nitrogen metabolism.

Risk in Pregnancy

Adverse effects

Flatulence and slight abdominal distention or colic, diarrhea and decreased appetite.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug, patients with galactosemia. Intestinal occlusion. Precautions: Lactulose should not be used with other laxatives.

Interactions

The concomitant use of lactulose with high doses of non-absorbable antacids may inhibit the acidifying action of the intestinal environment induced by lactulose.

I -ORNITINE-I -ASPARTATE

Clue	Description	Indications	Route of administration and dosage
	GRANULATED	Hepatic encephalopathy	Oral.
		acute or chronic.	
	Each envelope contains:		Adults:
	L-ornithine-L-aspartate 3 g.		
			From 3 to 9 g every 24 hours, after food, dissolved in
010.000.3830.00	Container with 10 sachets.		water or tea.
010.000.3830.01	Container with 30 sachets.		
			Maximum dose 18 g every 24 hours (6 sachets) in
			severe cases.
	INJECTABLE SOLUTION		Intravenous by continuous infusion.
	Each vial contains: L-ornithine-L-		Adults:
	aspartate 5 g.		5 to 10 g every 24 hours in case of acute hepatitis.
010.000.3826.00	Container with 5 vials with 10 mL.		
			From 10 to 20 g every 24 hours in chronic hepatitis and
			liver cirrhosis; In severe cases the dose can be increased
	1		

Generalities

Natural salt of the amino acids L-ornithine and L-asartate. They constitute a critical substrate for the synthesis of both urea and glutamine. They increase the elimination of ammonia in two ways: 1) Activation of the hepatic urea cycle through the contribution of the metabolic substrates ornithine and aspartate. 2) They promote the production of glutamate and stimulate the elimination of ammonia through the synthesis of glutamine in the liver, brain and muscle tissue.

Risk in Pregnancy	b

	GEL	Local anesthesia.	Mucocutaneous.
	Each mL contains:	Hemorrhoidal pain.	Adults:
	Lidocaine hydrochloride 20 mg.		
			Apply an appropriate amount to the area to be
010.000.0260.01	Container with 20 mL.		anesthetized.
010.000.0260.02	Container with 30 mL.		1

Generalities

Local anesthetic that blocks nerve conduction by interfering with the exchange of sodium and potassium across the cell membrane.

Risk in F	regnancy	b
	Adverse effe	cts

Hypersensitivity reactions.

Contraindications and Precautions

Contraindications: Known hypersensitivity to amide-type local anesthetics or the other components of the formula.

Interactions	

Adverse effects increase with nervous system depressants. With opiates and antihypertensives, arterial hypotension and bradycardia occur. With other antiarrhythmics, their effects on the heart increase or decrease. With inhaled anesthetics cardiac arrhythmias.

MESALAZINE

Clue	Description	Indications	Route of administration and dosage
	RECTAL SUSPENSION	Chronic nonspecific ulcerative	Rectal.
		colitis.	
	Each 100 mL contains:		Adults:
	Mesalazine 6.667 g.	Crohn's disease.	
010.000.1244.00	Container with 7 enemas of 60 mL.		Apply the contents of an enema every 24 hours, before going to bed.
	SUPPOSITORY		Rectal.
	Each suppository contains: Mesalazine 1 g.		Adults:
010.000.4175.00 010.000.4175.01	Container with 14 suppositories. Package with 28 suppositories.		1-2 suppositories every 24 hours.

	ENTERIC COATED DRAGEE OR RELEASE TABLET	Oral.
	PROLONGED	Adults:
	Each enteric-coated dragee or extended-release tablet contains:	500 mg. every 8 hours, for 6 weeks.
	Mesalazine 500 mg.	
010.000.4186.00	Package with 30 enteric-coated dragees or extended release tablets.	
010.000.4186.01	Package with 40 enteric-coated dragees or prolonged-release tablets.	
010.000.4186.02	Package with 50 enteric-coated dragees or prolonged-release tablets.	
010.000.4186.03	Package with 60 enteric-coated dragees or extended release tablets.	
010.000.4186.04	Package with 100 enteric-coated dragees or extended-release tablets.	
	RELEASE TABLET DELAYED	
	Each delayed-release tablet contains:	
010.000.4186.05	Mesalazine 500 mg	
010.000.4186.06	Package with 30 delayed release tablets.	
010.000.4186.07	Package with 40 delayed release tablets.	
010.000.4186.07	Package with 60 delayed release tablets.	
	SUPPOSITORY	Rectal.
	Each suppository contains:	Adults:
	Mesalazine 250 mg.	4 suppository sugar 9 hours
010.000.4189.00	Container with 30 suppositories.	1 suppository every 8 hours.
	Generalities	
The active metal decreasing infla	abolite of sulfasalazine blocks cyclooxygenase and infammation.	nibits the production of prostaglandins in the colon,
	Risk in Pregnancy b	
	Adverse effects	
Hypersensitivity	y reactions such as rash, bronchospasm and lupus rea	

Hypersensitivity reactions such as rash, bronchospasm and lupus reaction. With enema, in rare cases, myalgia, arthralgia and elevation in transaminase levels have been described.

Contraindications and Precautions

Contraindications: Hypersensitivity to the active ingredient. Severe liver and kidney disease, active ulcer and coagulation disorders.

Precautions: In uremia and proteinuria.

Interactions

With coumarins, methotrexate, probenecid, sulfapirazone, spironolactone, furosemide and rifampicin. Increases the hypoglycemic effect of sulfonylureas. It enhances the undesirable effects of glucocorticoids on the stomach.

OCTREOTIDE

Clue	Description	Indications	Route of administration and dosage
	INJECTABLE SUSPENSION	Endocrine tumors	Deep intramuscular.
	Each vial contains: Octreotide acetate equivalent to 20 mg of octreotide.	functional gastroentero-pancreatic.	Adults: 10-30 mg every 4 weeks.
010.000.5171.00	Container with a vial and two vials with diluent.		
010.000.5171.01	Package with a vial and a syringe prefilled with 2.5 mL of diluent.		
010.000.5171.02	Package with a vial and a syringe prefilled with 2 mL of diluent.		
	INJECTABLE SOLUTION		Subcutaneous.
	Each vial contains: Octreotide 1 mg.		Adult:
010.000.5181.00	Container with a 5 mL vial.		0.05 to 1.0 mg every 8 or 12 hours.

Generalities Synthetic analogue of somatostatin that acts as a potent inhibitor in the production of some hormones, especially growth hormone, insulin and glucagon.

Risk in Pregnancy	

Pain, paresthesia, redness and swelling at the application site. Anorexia, nausea, vomiting, abdominal pain, diarrhea, steatorrhea, hypoglycemia or hyperglycemia.

Contraindications and Precautions

Adverse effects

Contraindications: Hypersensitivity to the drug. Precautions: In diabetes mellitus.

Interactions

It may decrease the plasma concentration of cyclosporine and lead to transplant rejection.

OMEPRAZOLE OR PANTOPRAZOLE

Clue	Description	Indications	Route of administration and dosage
	INJECTABLE SOLUTION	Peptic ulcer.	Slow IV.
	Each vial with lyophilisate contains:	Gastric ulcer.	Adults:
	Omeprazole sodium equivalent to	Duodenal ulcer.	40 mg every 24 hours.
	40 mg of omeprazole. either	Reflux esophagitis.	In Zolinger-Ellison syndrome 60 mg/day.
	pantoprazole sodium equivalent to 40 mg pantoprazole.	Zollinger-Ellison syndrome.	
010.000.5187.00	Container with a vial with lyophilisate and vial with 10 mL of diluent.		

Inhibitor of gastric acid secretion through a specific effect on the proton pump in parietal cells.

Risk in Pregnancy	b
	Adverse effects

Rash, urticaria, pruritus, diarrhea, headache, nausea, vomiting, flatulence, abdominal pain, drowsiness, insomnia, vertigo, blurred vision, taste alteration, peripheral edema, gynecomastia, leukopenia, thrombocytopenia, fever, bronchospasm.

	Contraindications and Precautions

010.000.5224.00	Package with a pre-filled pen and a cartridge with		
	0.5 mL of diluent.		

Package with a pre-filled pen and a cartridge with 0.5 mL of diluent.

Generalities

It is a combination of recombinant interferon alpha 2 b or interferon alpha 2 a, produced by genetic engineering.

Risk in Pregnancy

C

Adverse effects

Swelling at the injection site, fatigue, tremors, fever, depression, arthralgia, diarrhea, abdominal pain, flu-like symptoms, anxiety, and dizziness.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug, autoimmune hepatitis or history of autoimmune disease,

	or		

psychiatric disorders, thyroid disease, decompensated liver disease.

Interactions

With rituximab and zidovudine the risk of bone marrow suppression increases.

PINAVERIO

Clue	Description	Indications	Route of administration and dosage
	TABLET	Bowel syndrome	Oral.
		irritable.	
	Each tablet contains:		Adults:
	Pinaverium bromide 100 mg.		
			100 mg twice a day.
010.000.1210.00	Package with 14 tablets.		
010.000.1210.01	Package with 28 tablets.		

Generalities

Calcium specific antagonist of smooth muscle.

Risk in Pregnancy C Adverse effects

Nausea, vomiting and heartburn.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug.

Interactions

None of clinical importance.

POLYDOCANOL

Clue	Description	Phlebosclerosant	Route of administration and dosage
	INJECTABLE SOLUTION	Indications for	Local in varicose package.
		esophageal varices.	
	Each mL contains:		Adults:
	Polidocanol 30 mg.		
			Infiltrate 1.5 to 2 mL into each esophageal varice; it can
010.000.4113.00	Container with a 30 mL vial.		be repeated in case of reappearance of bleeding.
			·

Generalities

Medication used to control bleeding from esophageal varices, producing inflammation of the intima and forming thrombi that occlude the lumen of the vessel and give rise to fibrosis.

Risk in Pregnancy NE

Adverse effects

Allergic reactions, hyperpigmentation in the sclerosed area, superficial inflammation of the veins, local necrosis and ulceration of the esophageal mucosa, collapse, dizziness, nausea, visual disturbances, difficulty breathing, sensation of pressure in the chest, acute pulmonary edema in case of the drug entering the systemic circulation, bronchoesophageal fistulas, pleural effusion, empyema.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug.

Precautions: Do not administer intravenously, intra-arterially or on the face.

Interactions

Simultaneous administration with anesthetics could intensify the effect on the heart (antiarrhythmic effect).

POLYETHYLENE GLYCOL

Clue	Description	Indications	Route of administration and dosage
------	-------------	-------------	------------------------------------

010.000.4191.00	DUST Each sachet contains: Polyethylene glycol 3350 105 g. Container with 4 sachets.	Preparation gastrointestinal for colon and rectal surgeries and endoscopy.	Oral. Adults: It requires fasting for 3 or 4 hours before drinking the solution, dilute the 4 sachets of powder in 4 liters of water. Drink a 250 mL glass every 15 minutes.	
Generalities Saline electrolyte solution. Diarrheal effect by exceeding the volume of liquid ingested, the intestinal distension and absorption capacity.				
Adverse effects Intestinal cramps, diarrhea, nausea, vomiting, abdominal cramps and anal irritation.				
Contraindications and Precautions Contraindications: Hypersensitivity to the drug, intestinal obstruction, gastric retention, intestinal perforation, toxic megacolon.				
Precautions: Impaired gag reflex, coma with tendency to regurgitation. Children under 5 years old.				
Interactions Diarrhea is promoted with laxatives, while antidiarrheals or antimuscarinics decrease its effect.				

RACECADOTRILE

Clue	Description	Indications	Route of administration and dosage
	Oral Granules	Antidiarrheal, indicated	Oral.
	Each envelope contains:	as adjunctive therapy to parenteral oral rehydration treatment or	Children and infants: 3 months of age and older.

	Each envelope contains:		mg/kg.
	Racecadotril 30 mg		
010.000.6130.00	Container with 18 sachets		
	I	ļ	

Generalities Anti-intestinal secretory agent, which reduces intestinal hypersecretion of water and electrolytes, without affecting basal secretion. It has been shown to have no effect on intestinal motility.

> Risk in Pregnancy Adverse effects

Vomiting, fever, hypocalcemia.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug.

Precautions: Not for use in people with fructose intolerance, glucose/galactose malabsorption syndrome, or sucrose isomaltose deficiency.

Interactions

None of clinical importance.

RANITIDINE

Clue	Description	Indications	Route of administration and dosage
	INJECTABLE SOLUTION	Gastroduodenal ulcer.	Intramuscular or slow intravenous (5 to 10 minutes).

Generalities

It inhibits by competition the action of histamine (H2) in the receptors of parietal cells, decreasing gastric secretion.

Risk in Pregnancy b

Adverse effects

Neutropenia, thrombocytopenia, headache, malaise, dizziness, confusion, bradycardia, nausea, constipation, jaundice, rash.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug and other H2 receptor antagonists, cirrhosis and hepatic encephalopathy, renal failure.

Interactions

Antacids interfere with its absorption. Increases blood levels of glipizide, procainamide, warfarin, metoprolol, nifedipine and phenylhydantoin; decreases the absorption of ketoconazole.

CHOLESTYRAMINE RESIN

Clue	Description	Indications	Route of administration and dosage
	DUST	Hypercholesterolemia.	Oral.
010.000.4112.00	Each envelope contains: Cholestyramine resin 4 g. Container with 50 sachets.		Adults: 4 to 6 g before meals. Maximum dose 24 g/day.
0.00000.11.12.00			Children 4 to 8 g/day. Divide doses every 8 hours and administer with food.

Generalities

It combines with bile acid to form an insoluble compound that is eliminated.

Risk in Pregnancy c

Adverse effects

Constipation, fecal impact, hemorrhoids, abdominal discomfort, colic, flatulence, nausea and vomiting. Rashes, irritation of the skin, tongue and perianal area. Deficiencies in vitamins A, D, K, due to decreased absorption.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug.

Interactions

It decreases the absorption of paracetamol, oral anticoagulants, beta blockers, corticosteroids, digitalis, fat-soluble vitamins, iron preparations, thiazide diuretics and thyroid hormone.

SUCRALPHATE

ı	Clue	Description	Indications	Route of administration and dosage
		TABLET	Duodenal ulcer.	Oral.
		Each tablet contains: Sucralfate 1 g.	Gastric ulcer. Gastritis.	Adults:
	010.000.5176.00	Package with 40 tablets.	Guotino.	1g four times a day or 2g twice a day.

Generalities	

It is a basic aluminum salt of sucrose octasulfate, it inhibits pepsin and absorbs bile salts, it acts on the ulcerated site by forming a protective barrier against the penetration and action of gastric acid.

Risk in Pregnancy	Ł

Adverse effects

Dizziness, drowsiness, constipation, nausea, gastric upset, diarrhea.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug.
Precautions: In kidney failure. Its safety and effectiveness in children have not been established.

Interactions

None of clinical importance.

SHI FASALAZINE

Clue	Description	Indications	Route of administration and dosage
	ENTERIC COATED TABLET	Chronic ulcerative colitis	Oral.
		nonspecific.	
	Each enteric-coated tablet contains:		Adults:
			Start: 2 to 4 g per day, divided every 6 hours.
	Sulfasalazine 500 mg.		
040 000 4504 00			Support: 2 to 6 g daily, divided each
010.000.4504.00	Package with 60 enteric-coated tablets.		6 hours.
			Children over 2 veers
			Children over 2 years: Start with 40 to 60 mg/kg body weight/day in divided
			doses every 4 to 8 hours, continue with 30 mg/kg body
			weight daily, in divided doses every 6 hours.
			worght daily, in divided decee every e heare.

Generalities

The mode of action of SSZ or its metabolites 5-AAS and SP is still under investigation but may be related to the anti-inflammatory and immunomodulatory properties that have been observed in animals and *in-vitro models*.

Risk in Pregnancy	ŀ	t
INISK III FIEGIIAIICY	-	7

Adverse effects

Nausea, vomiting, diarrhea, headache, hepatotoxicity and nephrotoxicity, erythema multiforme, dermatitis, oligospermia.

Contraindications and Precautions

Contraindications: Hypersensitivity to the drug and its metabolites, sulfonamides or salicylates, porphyria. Intestinal and urinary

Precautions: Liver or kidney dysfunction, bronchial asthma.

Interactions

Decreases the absorption of digoxin and folic acid.

TEDI IDDECINI

		(FNTÿ).	Continued treatment in patients with
			ulcerative colitis should be reconsidered
			carefully if not observed
			evidence of therapeutic benefits in
			week 10. Patients who have experienced a
			decreased response may benefit from a
			increase in the frequency of
			administration of vedolizumab at 300 mg
			every four weeks.

Vedolizumab is a gut-specific biological immunosuppressant. It is a humanized monoclonal antibody

Generalities

which specifically binds to the ÿ4ÿ7 integrin, which is mainly expressed in T helper lymphocytes that migrate to the intestine. By binding to ÿ4ÿ7 of certain lymphocytes, vedolizumab inhibits the adhesion of these cells to the mucosal adresin cell adhesion molecule-1 (MAdCAM-1) but not to the vascular cell adhesion molecule-1 (VCAM-1).

ļ	Risk in Pregnancy C
	Adverse effects

Nasopharyngitis, bronchitis, gastroenteritis, upper respiratory tract infections, influenza, sinusitis, pharyngitis, vulvovaginal candidiasis, oral candidiasis, pneumonia, headache, paresthesia, blurred vision, hypertension, oropharyngeal pain, nasal congestion, cough, anal abscess, anal fistula, nausea, dyspepsia, constipation, bloating, flatulence, hemorrhoids, pruritus, eczema, erythema, night sweats, acne, folliculitis, arthralgia, muscle spasms, back pain, fatigue, pain in extremities, pyrexia, infusion site reaction.

Contraindications and Precautions

Hypersensitivity to the active ingredient or to any of the components of the formula. Active serious infections, such as tuberculosis, sepsis, cytomegalovirus and listerosis, and opportunistic infections such as Progressive Multifocal Leukoencephalopathy (PML). Vedolizumab is contraindicated during pregnancy, lactation and in children under 18 years of age. Infusion-related reactions. Infections. Malignant neoplasms. Previous and concurrent use of biological products. Live and oral microorganism vaccines.

No interaction studies have been performed. Vedolizumab has been studied in patients who suffer from ulcerative colitis and Crohn's disease and who receive, concomitantly, corticosteroids, immunomodulators (azathioprine, 6-mercaptoputin, and methotrexate) and aminosalicylates. Population pharmacokinetic analyzes suggest that coadministration of such agents had no clinically relevant effect on the pharmacokinetics of vedolizumab.
